Austen Nelson

1 Progress

This week I didn't make as much progress as I would have liked. This week was busy with my classes and with midterms coming up I didn't spend as much time as I would like on my project. I created the ingredient co-occurrence graph and started looking at my data. I tried to apply a partitioning algorithm to my ingredients but all the ingredients cluster into three groups. I installed Zotero and am in the process of organizing my research and notes. This week I would like to do some more meaningful analysis and figure out how to use the graph-embed library more effectively.
