URMP: Report Week 4

February 10, 2020

Panayot Vassilevski

Austen Nelson

1 Progress

My primary accomplishment this week was figuring out how to use graph-embed to partition my data and embed it into a 3 dimensional space. I have tested with a couple different sub sets of my data and have some interesting results. I am definitely having success at clustering ingredients that show up in recipes together. This and this are a couple of the embeddings that I created with my data. I still didn't accomplish as much as I would have liked to this week. My course load this term is heavy and I didn't think I would be as busy as I am. Next week after midterms I hope I have some more time to commit to working on this.
